# IDeskBand interface

Article • 05/02/20172 minutes to read

Gets information about a band object.

## Members

The **IDeskBand** interface inherits from **IDockingWindow** but does not have additional members.

## Remarks

Use the **IDeskBand** interface when you are implementing a band object. See the Creating Custom Explorer Bars, Tool Bands, and Desk Bands article for more information about band objects.

Do not call this interface directly. **IDeskBand** is used by the Shell or the browser to get display information for a band object.

To get display information for the **Links** toolbar, call CoCreateInstance with the following **CLSID**.

```
DEFINE_GUID(CLSID_QuickLinks, 0xe5cbf21, 0xd15f, 0x11d0, 0x83, 0x1, 0x0, 0xaa,
0x0, 0x5b, 0x43, 0x83);
```

## Requirements

| | |
|---|---|
| Minimum supported client | Windows XP |
| Minimum supported server | Windows 2000 Server |
| Header | Shlobj.h |
| IDL | Shobjidl.idl |
