Is there any API that allows to control which icons are shown in the Windows (7) Taskbar at a given time? I would like to have the processes still running, but their icons not show up on the taskbar.

windows api taskbar

Are you using c# or c++? WinForms or WPF? – vidstige Feb 28, 2011 at 18:23

You only want the icons to be omitted? Or do you want the button to be omitted too? I use my taskbar in a mode where you see both icon and text in a single button. – David Heffernan Feb 28, 2011 at 20:43

I was thinking to choose the language after I had an idea how to do it :-) I'd rather use C# but I wouldn't mind do it in C++. I want the window to be hidden from view, including from the taskbar; so the button should be omitted as well. – webdreamer Mar 2, 2011 at 12:17

See the various extended window styles in CreateWindowEx, and figure out which one suits your needs. (Many of them deal with taskbar items, it's not just one.) Then just set the style with `SetWindowLong` .

I want the window to be hidden from view, including from the taskbar;

Hide the window. ShowWindow

```
ShowWindow(hwnd, SW_HIDE);
```

Have you considered creating an icon in the system tray or creating a windows service?

You want to create the windows using CreateWindowEx and use the WS_EX_TOOLWINDOW style to hide the window from the taskbar. Also, once you've created the window, call ShowWindow with SW_HIDE.

I'd try to send them `WM_SETICON` with `NULL` for both the big and small icons.
