Winforms File Manager and Transfer

JP **Jonathan Platt**
created 2 years ago

Greetings,

Does DevExpress offer file manager UI controls and web transfer components for Winfor
selecting files and transferring them to a web server (upload only - download not require

If I am required to purchase a separate file transfer library elsewhere, I could just use Dev
front-end to that. I'd prefer to not do that, but what do you have available in this situatio
trols that would work in Winforms?

Thanks,
Jonathan Platt

Hi Jonathan,

To allow end-users to select a file, I suggest you use our XtraOpenFileDialog.
As for uploading a file to a web server, this is a common programming task and it does n
nents. Thus, I suggest you find a suitable solution on public resources. Here is what I fou
How to upload file to web server using C# windows form
File upload to web server using C#
I look forward to your results.

Hi,

Although we don't have a special tutorial illustrating how to accomplish this task, you can study th

This will let you know what controls are used and how they are configured.
Should you have further questions, let me know.

Thanks, Igor.

For the purposes of anyone landing on this ticket, it turned out that trying to reproduce the form from scratch was far more difficult than just copying the WinExplorerView demo source code. Surprisingly, I was able to make just a few adjustments to the demo source. These were the basic steps.

1. Copy from C:\Users\Public\Documents\DevExpress Demos 20.1\Components\WinForms\CS\GridMainDemo\Modules\WinExplorerView*.*
2. There's no need for the WinExplorerViewDatabaseBinding.* files. They just supply a demo database.
3. Use WinExplorerView.Designer.cs verbatim with just a class name change, except I had to remove the Columns namespace reference from six lines. I still don't understand why, but maybe something to do with a namespace conflict in my solution.
4. Change the class name from ExplorerView to ucWinExplorer and its inheritance from TutorialControl to XtraUserControl.
5. Remove or comment ReportGeneration region at bottom of WinExplorerView.cs - it's a demo code reference and causes a compile error.

Thanks,
JW

You are always welcome, Jonathan.
Thank you for sharing this solution. We greatly appreciate this!
